Sparse Routing for Long-Context Retrieval

A. Verma and L. Okafor

Abstract: We study retrieval over documents longer than 100 pages.
Our sparse routing method improves recall by 12 percent over a dense baseline.
We release code and an evaluation set.

Results

On the long-document set, recall at 10 rose from 61 percent to 73 percent.

Latency increased by 8 percent.

Conclusion: sparse routing is a practical way to read long documents.
